English: Advanced (C1) — Native Portuguese

Summary

Backend developer with production experience in TypeScript/Node.js, PostgreSQL, and AWS infrastructure. Available for remote positions.

Work Experience

Backend Developer | eHub Solutions | Dec 2025 – Apr 2026

(Commercial automation startup)

- Architected and shipped a full CRM (lead pipeline, kanban, real-time dashboard) with PHP 8.1 as the system core and Node.js + Socket.io exclusively for real-time communication. Leadership gained real-time visibility into the full sales funnel from first contact to post-sale.
 - Integrated WhatsApp API (Evolution) + Asaas payment gateway (PIX/card), automating lead processing and eliminating manual handoffs in the payment flow.
 - Migrated infrastructure from VPS to AWS (EC2, RDS, S3, IAM). Configured GitHub Actions deploy pipeline with pre-activation health checks. Result: zero downtime across deployments.
 - Containerized independent services (MySQL, PostgreSQL, Redis) with Docker Compose, isolating failure domains and enabling independent deploy cycles per service.
-

Projects

Lead Management API

TypeScript · Node.js · Express · PostgreSQL · Jest · Supertest

REST API covering the full lead lifecycle: creation, retrieval, and status updates. Centralized error handling with PostgreSQL error code translation, integration tests against a real database with per-test isolation via TRUNCATE. Server/app separation for Supertest compatibility without opening a TCP port.

CRM Clicca

PHP 8.1 · Node.js · Socket.io · Redis · MySQL · PostgreSQL · AWS · Docker

Production system. Automated lead pipeline with WhatsApp + payment integration (PIX/card).

github.com/matheuslyam/crm

SGO — Operations Management System

TypeScript · Node.js · Hono · Next.js · PostgreSQL · Drizzle · Docker

Operations platform for vehicle registration agencies. Automated expiration engine, immutable audit log, document generation. Active development with ongoing market validation.
github.com/matheuslyam/SGO

Hybrid Checkout

TypeScript · Asaas API

Asaas payment gateway integration supporting three payment modalities (PIX, card, and hybrid). Validated in production.

Technical Skills

Category	Technologies
Languages	TypeScript, JavaScript
Runtimes & Frameworks	Node.js, Express
Infrastructure & DevOps	AWS (EC2, RDS, S3, IAM), Docker, GitHub Actions, Nginx
Databases	PostgreSQL, MySQL, Redis
Testing	Jest, Supertest
Tools	Git, Drizzle ORM, Zod, Socket.io
Integrations	REST, WhatsApp (Evolution API), Asaas (Payments)
