Work Experience

Backend Developer | eHub Solutions | Dec 2025 – Apr 2026

- Architected and implemented a complete CRM (lead pipeline, kanban, real-time dashboard) using PHP 8.1 as the system core and Node.js + Socket.io exclusively for real-time communication. The CEO was able to track the sales funnel from first contact to post-sales in real time.
- Integrated Evolution API (WhatsApp), enabling sales reps to communicate with clients directly through the CRM and eliminating the need for multiple platforms (per CEO request).
- Migrated infrastructure from VPS to AWS (EC2, RDS, S3, IAM). Configured deploy pipeline via GitHub Actions with pre-activation health checks. Result: zero downtime in deployments.
- Containerized independent services (MySQL, PostgreSQL, Redis) via Docker Compose, ensuring fault isolation and independent deployment cycles per service.

Projects

Lead Management API | *TypeScript · Node.js · Express · PostgreSQL · Jest · Supertest*

REST API with full lead lifecycle: creation, retrieval, and status update. Input validation, centralized error handling with PostgreSQL error code translation, integration tests against a real database with per-test isolation via TRUNCATE. Separation between *server.ts* and *app.ts* for testability without opening a TCP port.
github.com/matheuslyam/lead-management-api

SGO — Operational Management System | *TypeScript · Node.js · Hono · Next.js · PostgreSQL · Drizzle · Docker*

Operational management platform for vehicle registration agents. Automated expiration engine, immutable audit log, document generation. Active development with ongoing market validation.

Technical Skills

Language · TypeScript

Runtimes & Frameworks · Node.js, Express

Infrastructure & DevOps · AWS (EC2, RDS, S3, IAM), Docker, GitHub Actions, Nginx

Databases · PostgreSQL, MySQL, Redis

Testing · Jest, Supertest

Tools · Git, Drizzle ORM, Zod, Socket.io

Education

Data Structures and Algorithms

In progress

English: Advanced (C1)
